

India in Pixels Internship Assignment

Your task is to create a React App that renders a map of India. On hovering, there should be a tooltip showing the state's name. On clicking any particular state, it should zoom in to focus on that state. On clicking again, it should zoom back to the India map.

- You need not show districts, but it will be a bonus if you can
- You may use any library you feel like
- You are free to use GPT to write code but if you get selected for the interview, you will have to write additional code on your own, live, so make sure you understand your code well.

Implement any other features you think will help you stand out.

Deadline: 15th Octobers 2024, 5 pm [Please send the submission as an email to hello@iashris.com]

Deliverables:

- **A deployed link to interact with your project**
- **Link to the Github repo**
- **A Google doc of 1-2 pages of your approach, decisions taken for the project**

Fewer the external libraries you use, the better.
